

Češov, Jičín dist., Hradec Králové Region

Prehistoric and/or Early Medieval hillfort

(1st cent. BC, Early Medieval?)

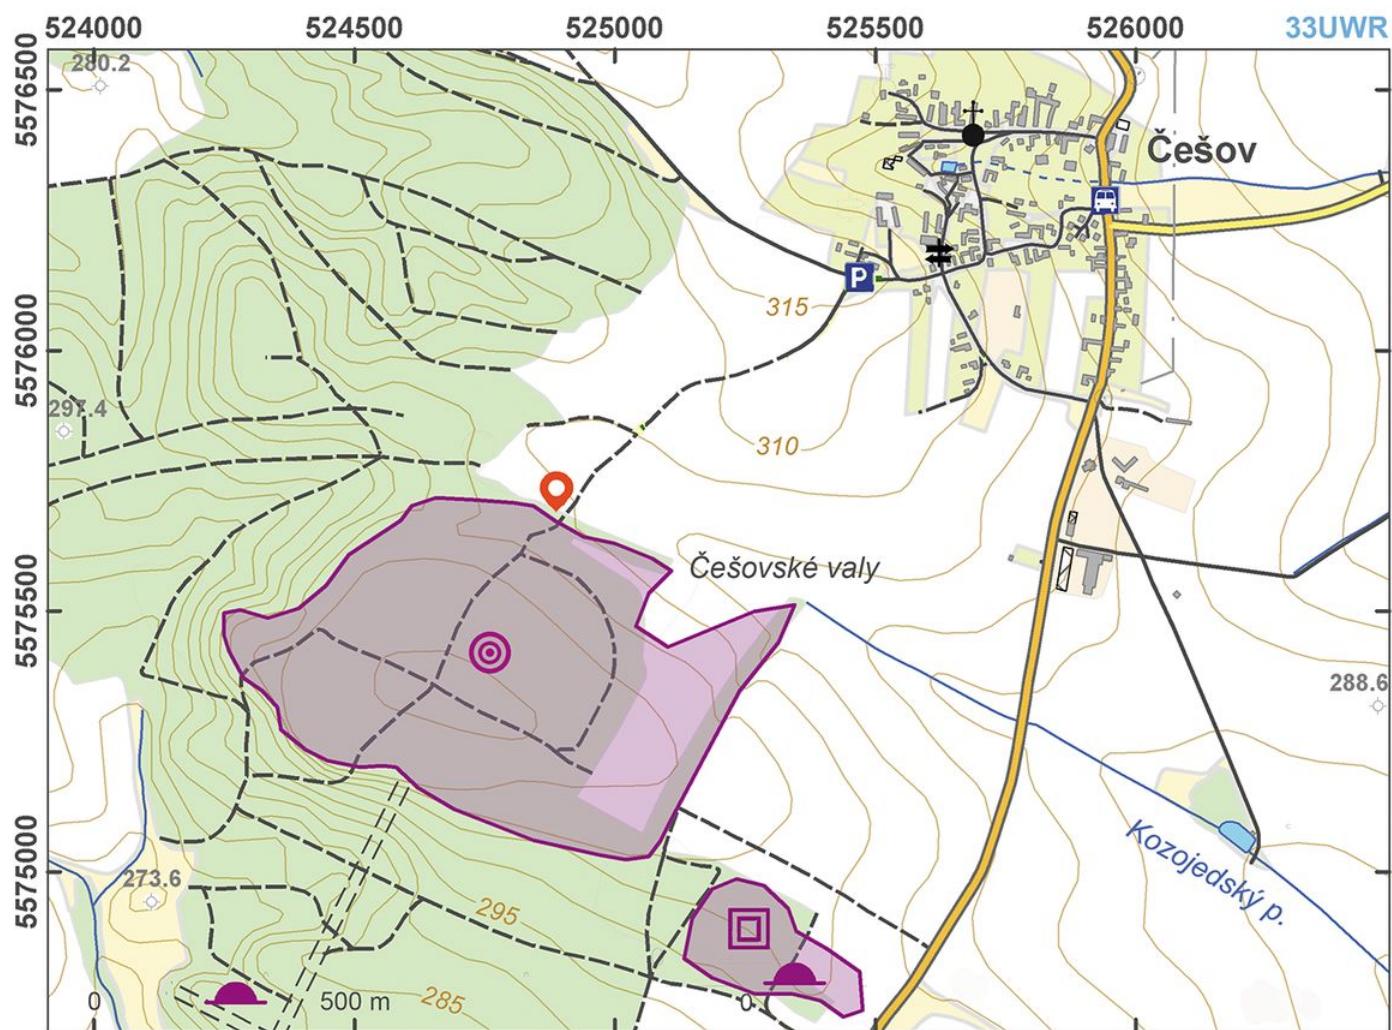

The hillfort known as 'Češovské valy' ('Češov Banks') has the most massive surviving earthworks in Bohemia. Due to the fact that no larger excavations have been conducted at the site, the dating of the fortification is unclear. The hillfort is most frequently dated to the La Tène Period but was obviously reused during the Early Middle Ages. It is also possible that the Swedes raised the ramparts during the Thirty Years' War. The original ramparts probably had a wood and earth structure and a front stone face.
