

Nemějice, Písek dist., South Bohemian Region

Prehistoric ritual site and its surroundings

(800–500 BC)

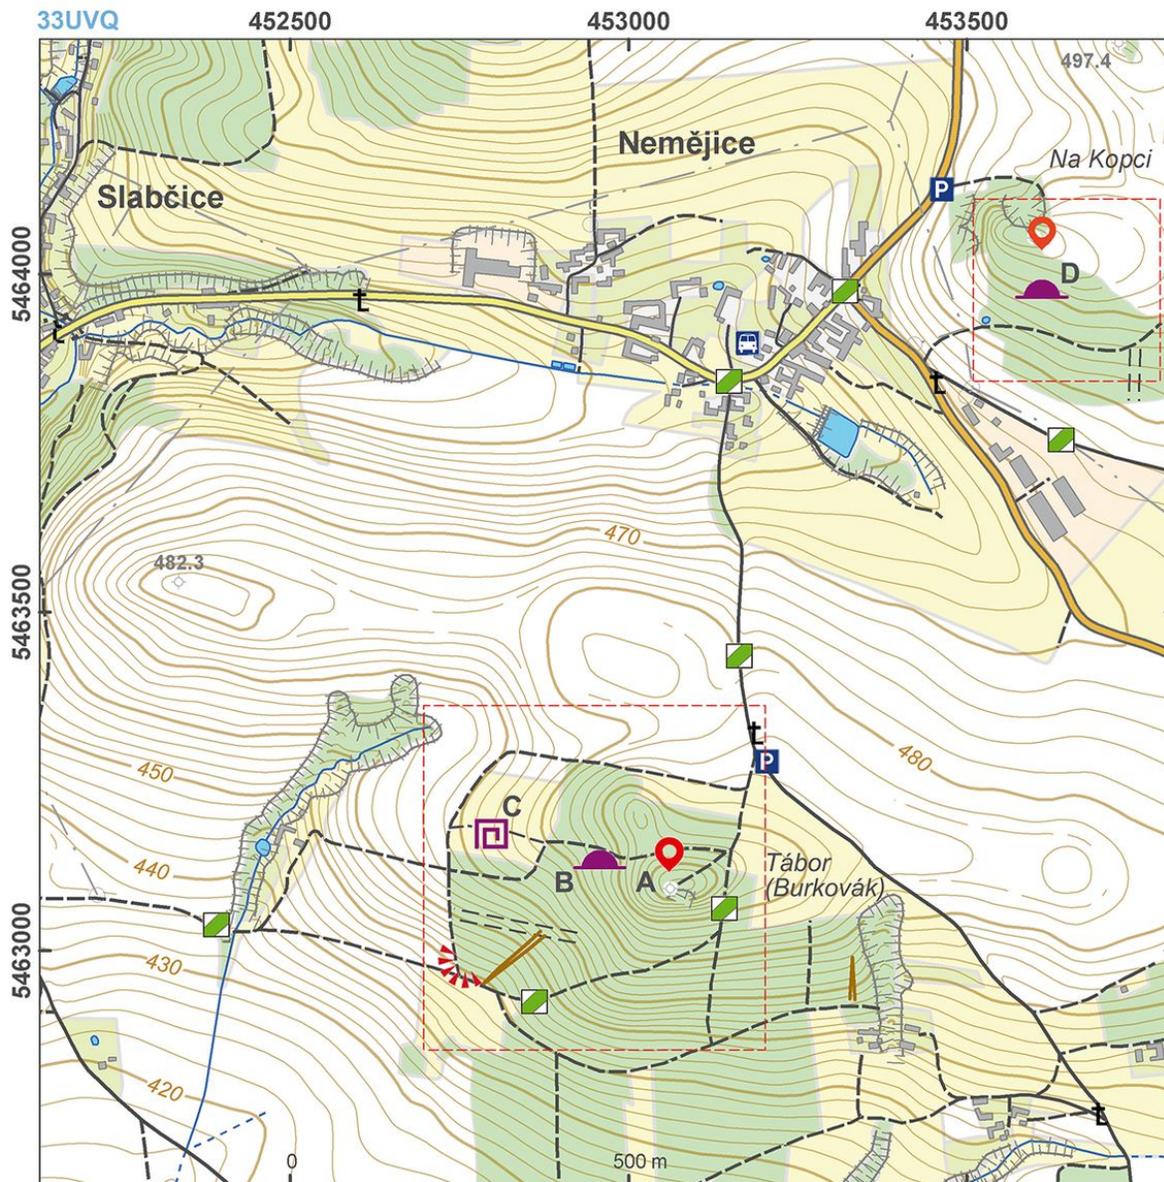

'Burkovák' represents a unique site of the Hallstatt Period. Excavations conducted on the small plateau on the hill top uncovered several thousand potsherds and around 1,500 small clay sculptures (birds and other animals, spools, toothed wheels, beads, etc.), which were probably hung on pillars or a tree during religious and burial rituals. The peak is likewise known as Mt Tábor, a site used for religious gatherings in the Middle Ages (Hussite period). Two Hallstatt Period barrow cemeteries are located near the site.
